Biotechnology is a diverse, complex and rapidly evolving field. Students and experienced researchers alike face the challenges of staying on top of developments in their field of specialty and maintaining a broader overview of the field as a whole. Volumes containing competent reviews on a diverse range of topics in the field fulfill the dual role of broadening and updating biotechnologists' knowledge. The current volume is an excellent example of such a book. The topics covered range from classical issues in biotechnology - such as, recent advances in all-protein chromophore technology- to topics that are focused on sequencing and recombinant vaccines. The information presented in this book will therefore will be of great value to both experienced biotechnologists and biotechnologists in training.* Includes over 200 figures with more than 60 tables* Discusses valuable information on pharming & transgenic plants * Provides detailed information on the production of plasmid DNA for pharmaceutical use
