Renewable Energy: Wind Power and Water Power Renewable energy is energy that is generated from sunlight, rain, tides, geothermal heat and wind. These sources are naturally and constantly replenished, which is why they are deemed as renewable. The usage of renewable energy sources is very important when considering the sustainability of the existing energy usage of the world. While there is currently an abundance of non-renewable energy sources, such as nuclear fuels, these energy sources are depleting. In addition to being a non-renewable supply, the non-renewable energy sources release emissions into the air, which has an adverse effect on the environment. License Terms: [Yes] Includes Graphics [Yes] Includes Reseller Template [Yes] Can sell Master Resale Rights [Yes] Can be added to paid membership sites [Yes] Can be offered as a bonus [Yes] Can be packaged [Yes] Can be offered through auction sites (physical product) [NO] Can be given away [NO] Can be added to free membership sites
