

Trick Photography And Special Effects

[DOWNLOAD HERE](#)

Have you ever seen an amazing photo but could never figure out how it was taken? How would you like to have the ability to create photos just like the one you saw? We're talking about photos that catch people's attention as soon as they see them. Photos so bold and unique that the people viewing them will be caught in awe. If you would like to learn how to use your camera in such a way that captures images that stand out against the crowd, keep reading. This comprehensive how-to guide explains the techniques some of the best photographers use to create jaw-dropping images. This e-book breaks down each of their tricks and demonstrates exactly how you can replicate their results, step-by-step. This e-book has 190 pages and contains over 400 creative photographs and illustrations created by dozens of photographers and artists. It is divided up into 3 parts: Module 1: Long Exposure Effects and Light Painting Learn how to light-paint like a pro! This module covers everything you need to know on capturing those beautiful illuminated long exposure photos you have been dreaming about. With over 60 pages reviewing different light sources describing what they do and how to use them, you won't ever find yourself in the dark without a bright idea! Taking long exposures of star trails and lightning is also covered. And if that isn't enough, you'll also enjoy the entire section on taking long exposures during the day. Oh, and if you don't have any Adobe Photoshop software at this point, don't worry. Most of the tricks in this module can be done right in-camera, with no Photoshop required. All you need is a DSLR camera. Module 2: Trick Photography and Special Effects This module goes over the mind-blowing special effects and optical illusion techniques that add drama and surreal creativity to your images. Adobe Photoshop software is recommended for this module but isn't 100% essential. This module will show you how to blow people away with Optical Illusions, HDR Photography, Infrared Photography, 360 Planetoids and Tunnels, The Droste Effect, Spiral Planets, Time-Displacement Photography, Birefringence, The Orton Effect, The Harris Shutter Effect, and Multiple Exposures. Module 3: Photoshop Projects This module is filled with Photoshop-oriented projects. It is easy to follow and the tools are simple to use. You'll learn how to create shocking images using Multiplicity Photography, Levitation Photography, Floating Fruit, The Invisible Man Technique, Fake Tilt-Shift Photography, and Flesh Manipulations. There are also several
