Multi Poster Tool

[DOWNLOAD HERE](#)

The Multi-Poster series has just got seriously awesome! The fifth generation of the multi-poster engine is faster, smarter and best of all, can post to more website types! A new approach to the engine design allows for many website types to be added easily in as little as 10 or 20 lines of code. Human verification routines such as captcha, reCaptcha and random questions are all supported, conveniently allowing you to type in the required data as and when needed. Once the topics have been created, the application provides links for the user to double-click and view the topics. This information is also logged and available for the user to browse as and when required. Replying to topics is also supported, allowing you to post new data easily and conveniently! The new allows the user to send as many as 250 topics at the same time via multi-threaded routines, and sports some ultra-cool always logged in abilities, increasing posting speed by 33 compared to previous versions, and helping bypass bot detectors. Features: Process up to 250 threads at the same time! Now thats fast! Support for many forum requirement types such as Topic Icons, Tags, Prefixes, etc. Integrated link-checker allows you to check your download links before you send, or any time after. Checks your post layout to ensure you dont send bad posts. Integrated post preview and live previewer, allowing you to see your modifications real time. Smart always logged in system improves speed and bot detection.
