High Definition video is here, so why not have an MPEG video editor that's made for HD? Import HD MPEG-2 files, cut out commercials and unwanted scenes on the frame level, then output them in HD or burn it to the HD Blu-ray Disc format! Only the edited parts of your footage will get re-encoded, which saves you time and leaves video quality untouched! Works great with non-HD MPEG files too! Now with Windows Media Center WTV file input support!
