

Xrumer 5.05 - Best Seo Software

[DOWNLOAD HERE](#)

XRumer is a Windows SEO program that is able to successfully register and forum spam with the aim of boosting search engine rankings. The program is able to bypass security techniques commonly used by many forums and blogs to deter automated spam, such as account registration, client detection, many forms of CAPTCHAs, and e-mail activation before posting. The program utilises socks and http proxies in an attempt to make it more difficult for administrators to block posts by source IP and features a proxy checking tool to verify the integrity and anonymity of the proxies used.
