- \* Allows you to turn off user downloads for any folders
- \* Allows you to create a 'view only' type of membership site
- \* Allows you to decide which folders public users can have full access
- \* Lets your user sort according to Name | Size | Date
- \* Enabled user selection for list or icon view

Dear Netpreneurs, You might have seen hundreds of people jump onto the 'membership site' bandwagon when it hit the market recently. It was so huge that hundreds were going around snapping up membership site software that promised them this and that and most of the times deliver.... All of these membership sites offers tonnes of functionalities and usages such as automated product delivery, secured product downloads, viral referral systems, user levels and many others that I can't even recall ever using BUT.... Almost every one of them missed the most important part of a membership site that is having a mechanism to manage the downloadable products for their end users. Let me explain: If you have ever provided downloadable software to your subscribers, then you'd agree that managing them can be a pain and consumes too much of your time. Providing single product downloads is a thing of the past. If you intend to have your own membership site, then you will have to think of how you should store, manage and present your downloadable items to your subscribers. Copying and pasting links is great.... If you have only one single product to offer...but when we talk about membership sites, that's not the case...think about January, February, March, etc...etc and how many products do you intend to offer per month? For years I have been searching for a solution like this to manage the products for my membership sites but sadly almost all membership sites do not have this

feature in it. I have always loved the concept of managing the downloads. The downloads were group into sections so that the users can download them with ease. I had hundreds of downloads all over the place and while it looks nice to the end user, it sure is a pain to putting them together. I had to upload the files using FTP, then copy and paste the links to every single one of the items into an HTML page. Then I tried other means of providing these downloads for membership sites using other software managers but still the manual input for links and such is there....this can sure put anyone off. How I wished to have a simple system as just upload it using an FTP into folders and just download it in a browser. I am sure it's going to take a lot of the pain off and my subscribers will definitely love the intuitively simple to use interface.

Wouldn't it be better for you to have a much simpler system where you upload through FTP and your files are ready to be downloaded nicely organized in sections like a browser based file directory? I have tried virtually everything until I decided the only way to have what I need is to develop one....and so I did:

Behold a powerful method to date, in displaying your uploaded files thru a browser! FileXeekeer is the ultimate tool to use as a browser file manager thru AJAX. The superbly simple interface makes it intuitive enough for users, from beginners to advanced! Seeing IS Believing! FileXeekeer can be easily integrated into almost all web pages! As the administrator, you will have full access over which folder permits your user to Upload/Rename/Download/Delete/View/Create New Subfolders Just Some Ideas How You Can Benefit From This Excellent Tool Right Away! \* Build your list!-Stuff up FileXeekeer with freebies and allow only opted in subscribers to download. Trust me, you'll find it so fast to upload up to hundreds of items without worrying to copy and paste the links. \* Build a Paid Subscribers Stock Photo Website !- Create sub-folders named after categories and load up your own stock photos. Then use a third party membership script (not included) to handle subscription. Easy! \* Organize Multiple Downloads !-

...Instead of copying and pasting your links for, let's say, bonuses and related free products, why not use File Xeekeer. \* Build Your Own Viral Giveaway Website!- Allow the participants access as administrator and let them create their own subfolders named after their own products and they can later upload the products themselves! \* Create Your Own File Sharing Community - If you have a group of people who share the same passion, why not create a repository where you can share files, photos and other stuffs only your exclusive group can view? Just think about it....while this are just some ideas of how you can leverage through FileXeekeer...picture what you can gain when you add a little imagination. ;) No

Technical Experience Required! "Wow! That's awesome! But , I am not really a techie person....and I

don't really know database configuration...how can I use the software?" FileXeekeer comes packed neatly in a desktop installer that'll allow you to configure and upload your configured FileXeekeer through it's built in FTP program in mere minutes! ...and we assume that most just hate the idea of configuring MySQL DB because it's way to technical....so FileXeekeer was built without any MySQL config to worry about! Now you might be thinking that a much needed, excellent tool like this will cost an arm and a leg... If you had to hire a programmer to create this system for you, you could spend upwards of \$1200 to \$1500 dollars to have this put together... But, I'm not going to even come close to that price! But like all great things, the end product turns out to be so amazing that it can be applied to other tasks and other industries as well. And what we have right now is just the tip of the iceberg. Own this magnificent solution today and conquer new grounds with the power it'll give you! System Requirements: UNIX/Linux Operating System, PHP Version 4.2.x or PHP V 5.x, Ability To Use and Edit .htaccess Files With Mod-Rewrite Redirect Enabled. GD extension enabled (default on most installations) for thumbnails support. If this extension is missing, thumbnails are automatically disabled. Yes Revenue! I Just Have To Have This Software!
