UPLOAD, INSTALL & ACTIVATE ALL free or Paid WordPress Plugins & Themes. Quickly Do WP Installations. Hi, If you build as many sites as I do and you are constantly using the same plugins over and over, or you create different sites with different themes and different plugins and just want an easy way to sort through the plugins that you need on your hard drive well then I have the solution for you.. But first, do you find yourself with a downloads folder filled with plugins & themes that you either downloaded or bought and dont even know that you have? Is it a pain searching and sifting though tons of different plugins trying to find the ones you need? Do you often forget to upload very important plugins into your themes like contact us, sitemaps, about us, SEO plugins, etc? Do you hate having to continuously search for and activate sometimes 20 or even 30 plugins per install? Trust me I know what a pain it can be and I just wished there was an easy way to manage all my plugins and themes in a way that was easy to find the everyday essential plugins along with the *special* ones I wanted to use for a particular install. I wanted a software that could take care of the installation part without me having to do it all manually, like logging into cPanel, filling out a bunch of information in Fantastico, then having to search for, upload and activate all my plugins and themes. Thats why I decided to create an easy to use software to take care of all of that tedious boring stuff. WP Installer Pro was made for a quick and easy installation of any PAID for & FREE Plugin or Theme. Now you can literally pick the theme you want to use, then choose the plugins you want and click install! Thats it! All you have to do is buy your domain name and set-up the Domain Name Servers (or DNS from your domain registrar). The software logs into your cPanel, creates your new WP website then installs and activates all of the selected plugins and the selected theme. Now no more uploading plugins manually one by one and forgetting essential plugins. Heres The EXACT Steps: Fill In Some Information (cPanel Login, Admin Email & Password, Blog Title and Blog Sub-Title) Choose a FREE or Paid Theme Choose FREE & Paid Plugins Click Install! Thats It! The software literally takes care of all the other tedious stuff for you! You can even Favorite plugins by clicking a icon if you use that particular plugin consistently, making sure you do not forget important plugins like sitemaps, contact us pages, SEO plugins, etc. The software automatically checks for updates too. If you have been using WP

for a while, you know that not ALL updated plugins work well with certain themes. So now you can see if the plugin is updated or not (with a simple YES or NO) then you have the option to update the plugin depending on what theme you are using. Now its easy to see what plugins you have installed on your computer, easy to choose a theme and plugins depending on the website you plan to build, then youre just 1 click away from uploading, installing and activating all of your plugins. Another good thing about WP Installer Pro is that it is a desktop software that has an easy to use interface, but more importantly is Windows XP, Vista, 7 compatible AND Mac OS X compatible, so it can work on just about anyones computer! Now no more parallels and all this other complicated stuff you have to do just to use this software on your Mac! I highly recommend you grab this software now, because as more updates and options are available I will decide to split the software into separate licenses and increasing the price, but if you buy now you will automatically receive the developer license when it is released. This means you will receive ALL options and updates for FREE for LIFE! As of now you can use this software for your own sites or if you build sites for clients. You can use it for whom ever you want! But if you wait, you will be limited to only your own sites! So for the price of lunch you can get FULL ACCESS! FOREVER! So I hope you can see the effectiveness of this software and how it will save you a lot of time when installing a new theme and plugins. This is one of those simple yet very helpful tools that will NEVER get old, ALWAYS get better and you will ALWAYS use. Till next time,
