

Intelligent And Unblockable Popovers

[DOWNLOAD HERE](#)

We have now developed something that is able to prevent visitors leaving your web pages which is far BETTER than exit pop ups but is not annoying at all. It is neither annoying or obtrusive yet it brings your visitors back right BEFORE they leave your website. We christened it the SALES BLITZ because that's exactly what it does by encouraging your visitors to read an additional offer BEFORE they exit your web site, and many choose to buy. Sales Blitz Increases Your Sales Rate Threefold or More Here's how it works: It requires no programming experience and is very easy to add to your pages. After copying some software provided -IT RUNS ON EVERY PLATFORM ! SalesBlitz will remain on your website and analyzes your visitors' browsing habits using intelligent software to predict when they are about to leave your website not at the time they are actually leaving, but BEFORE they DO, that means when they are thinking about leaving the page. Right before they do, it will display a message or a web page of your choice in a way that absolutely cannot be ignored, yet is completely unobtrusive. The Sales Blitz will prevent everyone from leaving your site without buying, but will NOT be displayed to anyone who stays on your site. So, you'll be able to show something to everyone who wasn't going to buy anyway, without disturbing your loyal customers. Since the SalesBlitz is NOT a pop up, visitors who definitely want to leave the site don't even have to close it. It closes itself when people leave for good! So, they aren't annoying at all. Once you have the attention of the people who were going to leave your site, the real profit-pulling power of SalesBlitz begins. SalesBlitz produces no Pop Ups, so the pop overs Can Not Be Blocked, And They Are Not Obtrusive. Pop ups have been "out" for a long time now, since all major browsers block them automatically. The reason why Sales-Blitz works is that it actually uses an intelligent algorithm to detect when people are about to leave your web page, before they actually do.
