

Cristallight Software - Business Card Composer For Mac

[DOWNLOAD HERE](#)

The Home Business Card is a mac business card software for creating and printing business cards using various built-in label formats, clipart images, and pre-made business card templates provided. Home Business Card helps you to: - create impressive professional mac business cards, making people notice you and your business, - create a long lasting image of a business and its representative, - create and maintain relationships, personally and professionally, - save the time and effort to note down ones professional contact details, - socialize with other people. Image libraries and pre-defined business card templates: Hundreds of templates, horizontal and vertical layouts are supplied with the product. More than a thousand images for backgrounds and clipart in a variety of formats, including JPEG, TIFF, PDF, GIF, etc, are in the product image libraries. Business Card Paper formats There are many varieties of business card paper, if you plan to make perfect business cards, pay attention to choosing business card paper. Normally, a business card paper sheet contains 8 to 10 business cards. You should choose business card paper with gaps between cards if you want to print covering background image, or use business card paper with pre-printed background. You can print your mac business cards on papers from Avery, APLI, A-One, Compulabel, Canson, Data Becker, Decadry, Formtec, Herma, Herlitz, Sigel, Printec etc. Powerful printing features: Print any number of business cards starting at any position on the sheet, exclude certain cards from printing, control bleeds, printing offsets, crop and trim marks. Print your business card on mac printers and achieve excellent results, or export your design as JPEG, TIFF, PDF, BMP, PNG, etc. for outside printing. These files can be sent to a printing company or used as a card preview. Address Data: Home Business Card integrates with mac Address Book to import personal data into the address field objects. Google Maps: Integrate Google Maps objects to your card to show your personal or business location in Google Maps and place the map image on your business card. Barcodes: Add Code 128, Datamatrix and QR Code objects to your business cards. Editing Images: The product provides you with ability to use any of about 100 Core Image Effects and Filters available in MacOS X. Transform, crop, noise, tile, change colors, make gray scale, add bright, contrast, tint, twirl, bump, pinch your images, and add even more effects. Text Effects: Use circular text feature, or Power

Text for transforming your text. Make custom fill, stroke, shadow effects. Layers: Using the Foreground and Background Layers allows more control to card design process. Working with the background layer, you are not able to view, select or modify objects on the Foreground layer. When working with Foreground, you are not able to select or modify the Background objects, but can view them. Home Business Card is the ideal product: for creating professional business cards on Mac using pre-defined business card templates.
